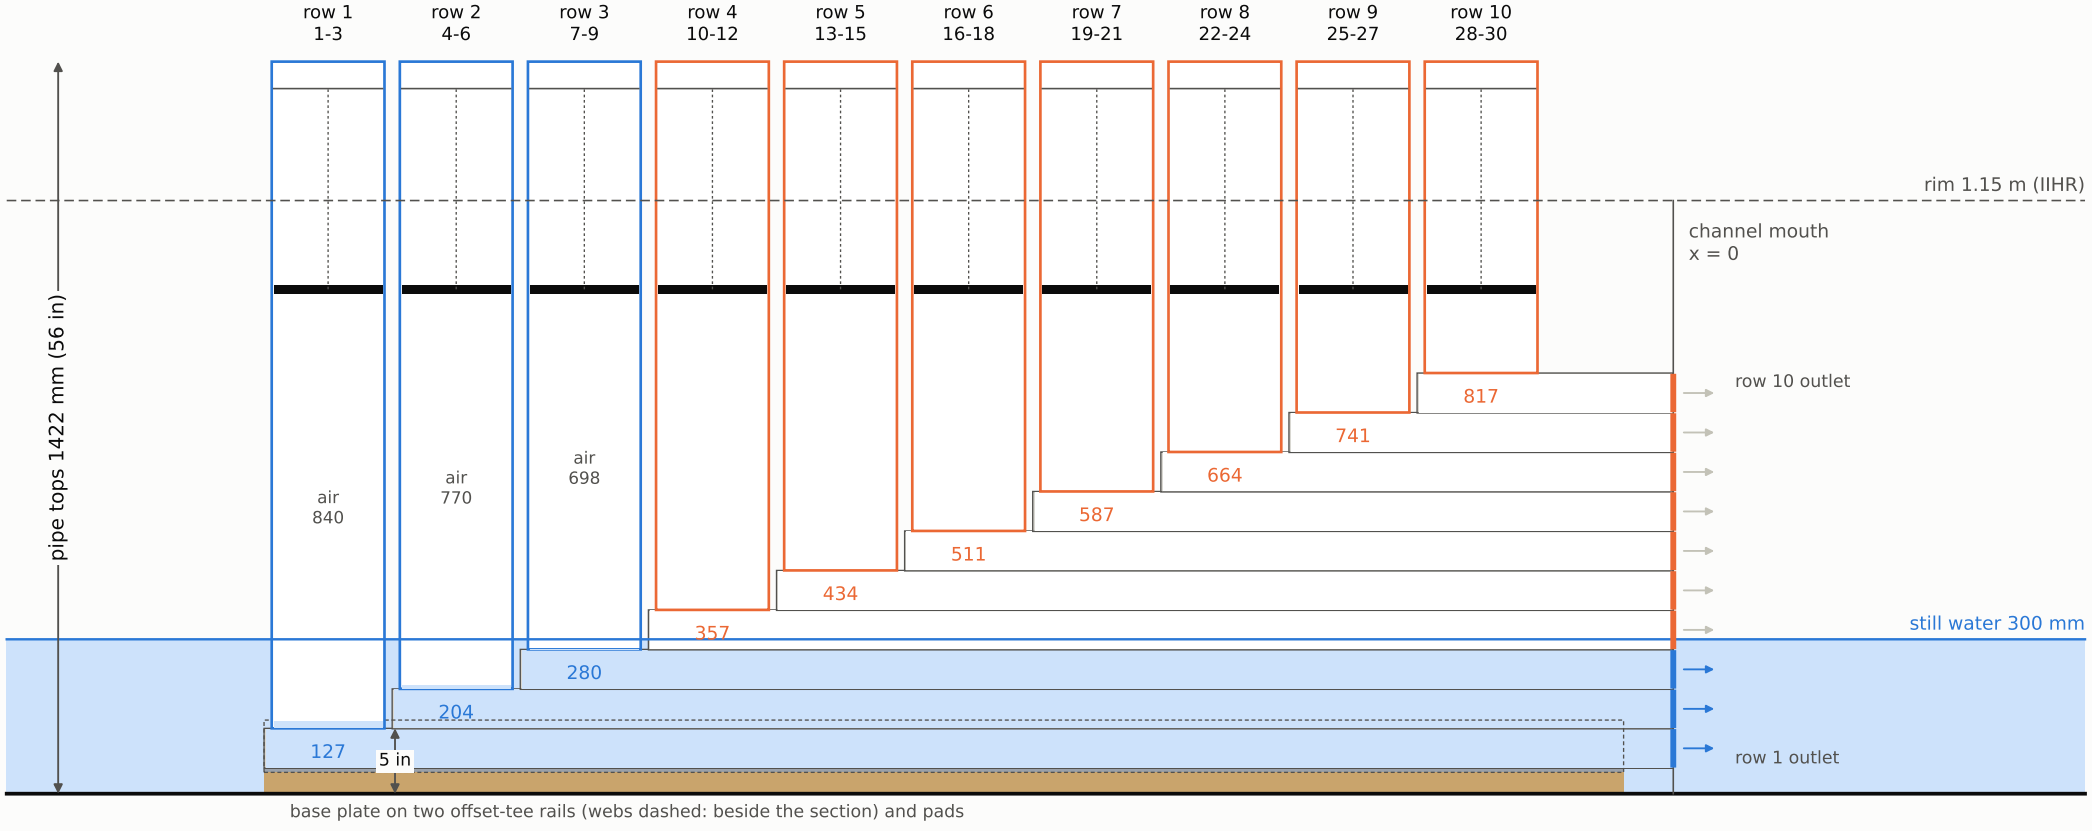
Piston bank, section on the centre lane (metres; labels mm). Still water 300 mm: rows 1-3 in the water.



Pipe bottoms (mm above the floor) step one duct layer per row: 5 + 3.02(n - 1) in (row 1 taped, the step drawn).
Each pipe empties into its own duct (grey band), which runs to its outlet in the block's face at the channel mouth; blue ducts are under water.
Dark bar: disc parked at 370 mm; dotted: its travel up to 0 mm (top tick). Disc height at 0 mm = 1350 mm, estimated from the motor's geometry: measure it.
Blue inside a pipe: water under the trapped air with the disc parked; 'air' = air column length, mm.
